

## Origin

In order to associate TDMS files with Origin and automatically import them in the Origin workspace when a new file in TDMS format is downloaded from ADEI the following actions should be performed

- Select any TDMS file and associate it with Origin by double clicking on the file and choosing "select the program for a list". The Origin8.exe executable should be selected in the opened list.
- While the folder is opened, select "Tools/Folder Options" from top menu, goto the "File Types" tab and select TDMS entry. Click on "Advanced" button and edit "open" action.
- Replace

```
"C:\Program Files\OriginLab\Origin8\Origin8.exe" %1
```

with

```
"C:\Program Files\OriginLab\Origin8\Origin8.exe" -R (impNITDM fname:="%1")
```

The path may differ.

- All done, click OK and enjoy TDMS files automatically opening in the Origin.
